

AI-3003 - Build a Natural Language Processing solution with Azure AI Services

Microsoft - Azure - Artificial Intelligence

Durata:

1 Giorno

Lingue:

Italiano

Certificazione:

-

Descrizione del corso

In this course, you will learn how to implement Natural Language Processing (NLP) solutions by using Microsoft Azure AI services. Specifically, you'll learn how to:

- Design a solution that processes natural language with Azure AI Language.
- Create a solution that analyzes text using preconfigured features.
- Train a model for a custom language solution for question answering and conversational language understanding.
- Understand, synthesize, and translate speech

Audience Profile

The primary audience for this course is application developers seeking to include natural language processing in their applications. Students should have experience programming in either Python or C#, be familiar with the Azure portal, and be comfortable provisioning Azure AI resources.

Programma

- Introduction
- Analyzing Text
- Translating Text
- Build a Question Answering Solution
- Build a Conversational Language Understanding Application
- Custom classification and named entity extraction
- Speech recognition, translation and synthesis
